Product Manager | B2B SaaS | Platform & Integrations | API-first

SUMMARY

Product Manager for API-first integration platforms, with 5+ years across enterprise B2B SaaS, hospitality technology and regulated healthtech. Built the integration layer beneath a hospitality PMS, canonical data mapping, event-driven synchronisation and configuration-driven partner onboarding across 10+ third-party systems - then moved upstream to own the multi-tenant product suite deployed on top of it.

Experienced in enterprise security certification, data residency architecture and shipping LLM orchestration to production. Work at the intersection of engineering, commercial teams and external technology partners.

EXPERIENCE

Technical Product Manager — TYNGO Products

HRS Hospitality and Retail Systems | Apr 2025 – Present | Berlin, Germany (Remote)

Own product direction for a multi-tenant hospitality platform and the licensed products deployed on it: guest journey and check-in, F&B ordering and meal entitlements, and spa operations with a guest-facing booking engine and Stripe payments. Deployed across hotel chains worldwide. 13-person delivery team.

- **Platform & deployment:** Own the multi-tenant platform layer that makes the suite deployable and licensable per customer, connectivity to Opera Cloud (OHIP) and Symphony/POS. Removed manual Service Delivery and DevOps tasks from customer rollouts, making deployment largely self-service, and onboarded 6 downstream products onto the event-driven replication layer, replacing manual reconciliation with real-time data.
- **Prioritisation & trade-offs:** Prioritise 4 product lines against competing customer, integration and compliance demands. Defined the boundary between AI products and core platform, then led the decoupled architecture that enforced it.
- **Enterprise certification:** Led GuestReg through Accor's product certification end to end: authored the documentation, coordinated pen test, and drove production approval directly with Accor, opening commercial access to Accor's global property network. Separately certified "Data Residency" with Oracle Opera Cloud, product routing guest PMS data to country-specific data centres.
- **AI orchestration:** Shipped an MCP-based orchestration layer connecting LLM services to hotel information, operations, bookings and F&B systems, enabling cross-product natural-language queries. Shipped LLM-powered translation and content generation with caching, guardrails and observability.
- **AI-assisted delivery:** Introduced PM-led prototype validation with hotel managers before any engineering commitment, handing validated scope to a small agentic development team. Took Duty Roster (AI scheduling assistant based on hotel needs) from zero to production in under two months. Now standard workflow across the portfolio.
- **Guest journey expansion:** Extended GuestReg beyond registration into a full pre-arrival and departure journey: pre-arrival email communications, passport and ID scanning, and checkout flows, allowing to serve more customer requirements, expanding the product's addressable market.

Product Owner — Platform & Integrations

HRS / Tyngo GmbH | Nov 2023 – Apr 2025 | Berlin, Germany (Remote)

Owned the integration layer for HRS's proprietary PMS, serving 40+ hotel chains. 12-person engineering team.

- **Configuration over code:** Replaced bespoke partner integrations with a configuration-driven mapping layer, shared data normalisation, event-driven sync, retry logic, idempotency... reducing average integration effort from around 6 engineering weeks to 2 and enabling the team to onboard 80+ properties through configuration.
- **Integration breadth:** Owned the layer running beneath 10+ integration types, defining the shared contracts each consumed rather than building every connection in isolation.
- **GuestReg 0→1:** Built and launched a digital registration workflow from 0→1, replacing manual paper-based registration with a PMS-integrated, self-service experience. Owned the guest data lifecycle, PMS sync, data mapping and consistency model across heterogeneous properties. Scaled to 50+ properties (~10,000 rooms), saving ~5 minutes of staff administration per check-in
- **Event-driven replication:** Built the real-time replication architecture, event-driven sync, retry logic and idempotency controls, establishing the platform-wide layer later adopted to power live data across the product suite.

Product Manager

CuraSinn | Feb 2021 – Oct 2023 | Berlin, Germany

Sole PM building a remote patient monitoring platform from zero, connecting patients, physicians and insurers under German healthcare reimbursement rules. 5-person internal engineering team plus an external mobile team.

- **Zero to reimbursement approval:** Defined product requirements and clinical workflows, taking the platform from 0 -> 1, to reimbursement-approved and live across 4 hospitals, monitoring 500+ patients.
- **Improved end-to-end workflow efficiency:** Identified friction across both the clinical alert workflow and user onboarding. Redesigned alert handling and thresholds with the clinical team, reducing clinician handling time by **35%**, while simplifying the user onboarding flow to reduce completion time by **25%** and increase onboarding completion by **18%**. Improving clinical capacity and reducing patient drop-off.
- **Clinical Discovery:** structured discovery with physicians and nurses, translating clinical needs into workflows, alert logic and onboarding flows. Instrumented product analytics to find drop-off points and prioritize against real usage rather than assumptions.
- **Dual product ownership (B2B and B2C):** Owned the physician platform with the internal engineering team and the patient mobile app with an external team simultaneously; two user groups with fundamentally different problems, across web and mobile.
- **Integrations:** Planned integrations with healthcare providers, insurance networks and Bluetooth medical devices, keeping data flow compliant across patients, clinicians and reimbursement systems.

Project Manager

Spreenauten GmbH | Aug 2019 – Dec 2020 | Berlin, Germany

Delivered telecom and IoT projects for enterprise clients including Amazon, coordinating development teams, hardware suppliers and stakeholders across technical delivery.

Associate Contract Coordinator

Miki Travel | Aug 2018 – Sep 2019 | London, United Kingdom

Managed supplier contracts across European markets for a Japanese tour operator.

SKILLS

Integrations & Platform: REST APIs, webhooks, event-driven architecture, RabbitMQ, API-first design, multi-tenant architecture, canonical data models, data mapping, synchronisation and normalisation, API authentication, idempotency and retry design, Oracle Opera Cloud / OHIP, Oracle Symphony, FIAS, multi-PMS environments, Stripe payment flows

AI & Modern Delivery: MCP orchestration, LLM integration, agents workflows, functional prototyping, RAG systems, AI-assisted product delivery, prompt and guardrail design

Product & Strategy: Roadmap prioritisation, customer discovery, agile delivery, technical requirements and PRD authoring, enterprise security certification, GDPR and data residency decisions, migration strategy, incident management, vendor evaluation, stakeholder management

Data & Monitoring: SQL, Grafana, PostHog, Tableau, API health monitoring and observability

Tools: Jira, Confluence, Figma, GitHub, Lovable

EDUCATION & CERTIFICATIONS

Double Bachelor — Business Administration & Tourism

Universidad Rey Juan Carlos, Madrid (2014–2018) · Exchange year: Rhine-Waal University, Germany (2016–2017)

Professional Scrum Master II (PSM II) · Professional Scrum Product Owner I (PSPO I) · ITIL 4 Foundation

LANGUAGES

Spanish (Native) · English (C1, professional) · German (B2)
